

GENERAL ASSEMBLY COMMONWEALTH OF KENTUCKY

2013 REGULAR SESSION

HOUSE BILL NO. 172

AS ENACTED

TUESDAY, MARCH 12, 2013

RECEIVED AND FILED
DATE March 21, 2013
3:36pm

ALISON LUNDERGAN GRIMES
SECRETARY OF STATE
COMMONWEALTH OF KENTUCKY
BY R. Allen

1 AN ACT relating to emergency anaphylaxis medications in schools.

2 WHEREAS, nearly 6 million American children have food allergies, more than 15
3 percent of school-aged children with food allergies have had a reaction in school, and
4 many of these children are at risk of anaphylaxis, a systemic allergic reaction that can lead
5 to death within minutes; and

6 WHEREAS, the National Institutes of Health recommends treating anaphylaxis
7 immediately after symptoms begin with an intramuscular injection of epinephrine because
8 delayed administration of epinephrine is the most predictive risk factor for prolonged or
9 fatal anaphylaxis; and

10 WHEREAS, epinephrine auto-injectors are life-saving for individuals with severe
11 allergic, anaphylactic reactions. Epinephrine is safe and easy to administer. It is dispensed
12 in a pre-measured dosage through an auto-injector containing a spring-loaded needle that
13 is enclosed before administration and automatically retracts following an injection; and

14 WHEREAS, the delay in the administration of epinephrine in a life-threatening
15 anaphylactic reaction that may occur from storing the devices only in the front office, in
16 the nurses' office, or when students are in other locations and their devices are in the
17 classroom, could potentially lead to a fatal outcome for a student with anaphylaxis; and

18 WHEREAS, rapid administration of epinephrine is critical for effective treatment of
19 anaphylaxis; and

20 WHEREAS, as Kentucky schools continue to improve their preparedness to address
21 children who are at risk of having an anaphylactic reaction in the school environment or a
22 school-sponsored activity, it is imperative that the epinephrine delivery devices be kept in
23 the classroom, with the teachers, or with the students and in key locations in the school to
24 serve as emergency backup for ready access, as these reactions may occur because of
25 inadvertent ingestion or contact reaction of a food allergen;

26 NOW, THEREFORE,

27 ***Be it enacted by the General Assembly of the Commonwealth of Kentucky:***

1 ➔ Section 1. KRS 158.836 is amended to read as follows:

2 (1) Upon fulfilling the requirements of KRS 158.834, a student with asthma or a
3 student who is at risk of having anaphylaxis may possess and use medications to
4 treat the asthma or anaphylaxis when at school, at a school-sponsored activity,
5 under the supervision of school personnel, or before and after normal school
6 activities while on school properties including school-sponsored child care or after-
7 school programs.

8 (2) A student who has a documented life-threatening allergy shall have:

9 (a) An epinephrine auto-injector provided by his or her parent or guardian in
10 his or her possession or in the possession of the school nurse, school
11 administrator, or his or her designee in all school environments that the
12 student may be in, including the classroom, the cafeteria, the school bus,
13 and on field trips; and

14 (b) A written individual health care plan in place for the prevention and
15 proactive management for the student in all school environments that the
16 student may be in, including the classroom, the cafeteria, the school bus,
17 and on field trips. The individual health care plan required under this
18 paragraph may be incorporated in the student's individualized education
19 program required under Pub. L. 94-142 or the student's 504 plan required
20 under Pub. L. 93-112.

21 (3) (a) Each school is encouraged to keep an epinephrine auto-injector in a
22 minimum of two (2) locations in the school, including but not limited to the
23 school office and the school cafeteria, so that epinephrine may be
24 administered to any student believed to be having a life-threatening allergic
25 or anaphylactic reaction. Schools electing to keep epinephrine auto-
26 injectors shall maintain them in a secure, accessible, but unlocked location.
27 The provisions of this paragraph shall apply to the extent that the

1 epinephrine auto-injectors are donated to a school or a school has sufficient
2 funding to purchase the epinephrine auto-injectors.

3 (b) Each school electing to keep epinephrine auto-injectors shall implement
4 policies and procedures for managing a student's life-threatening allergic
5 reaction or anaphylactic reaction developed and approved by the local
6 school board.

7 (c) The Kentucky Department for Public Health shall develop clinical protocols
8 in the school health section of the Core Clinical Service Guide manual that
9 is maintained in the county or district public health department to address
10 epinephrine auto-injectors kept by schools under this subsection and to
11 advise on clinical administration of the epinephrine auto-injectors. The
12 protocols shall be developed in collaboration with local health departments
13 or local clinical providers and local schools and local school districts.

14 (4) Any school employee authorized under KRS 156.502 to administer medication
15 shall not be liable for any civil damages for ordinary negligence in acts or
16 omissions resulting from the administration or the assistance in the
17 administration of epinephrine to any student believed in good faith to be having a
18 life-threatening allergic or anaphylactic reaction.

Speaker - House of Representatives

President of Senate
